

Aurex AI

AI Command Platform for Modern Business

A premium Dubai-rooted SaaS concept that helps companies capture leads, answer instantly, qualify prospects, book appointments and scale through installable AI employees.

BUILT FOR

Real estate first.
Then car rental, clinics, law firms, recruitment
and AI call centres.

Prepared as an investor/client pitch direction - no product
screens included.

The gap is not another CRM.

The gap is instant, intelligent business execution.

- Dubai businesses buy leads, but lose value when response speed is slow or inconsistent.
- Teams work across WhatsApp, calls, email, spreadsheets, calendars and portals.
- Owners cannot clearly see which leads were answered, qualified, booked and monetized.
- AI tools are fragmented: chatbot here, voice bot there, automation somewhere else.

CORE INSIGHT

The winner will not be the company with the most features. It will be the one that turns every inquiry into a managed business process.

Aurex AI product thesis

Dubai is the right launch market.

AI ambition, real estate velocity and business digitization are converging.

2031

UAE AI strategy aims to position the country as a global AI leader.

AED 761B

Dubai real estate transaction value reported for 2024 by Reuters/Fitch coverage.

D33

Dubai agenda targets a much larger, digitally enabled economy by 2033.

Why it matters for Aurex AI

- High-value leads justify automation ROI.
- WhatsApp-first customer behavior makes unified AI communication valuable.
- AI is aligned with national narrative, not a niche trend.

Sources: UAE official portal; Reuters/Fitch real estate market coverage; Dubai Economic Agenda D33 public materials.

Aurex AI is a command platform.

Not a chatbot. Not a CRM skin. A business operating layer for AI execution.

ONE PLATFORM

01 Unified communication

WhatsApp, email, web chat and voice intake in one commercial flow.

02 AI employees

Installable roles with scripts, permissions, knowledge and escalation rules.

03 Workflow automation

Follow-up, booking, routing, reminders and handoff into human teams.

CONTROL LAYER

04 CRM and pipeline

Lead status, qualification, viewing stage, owner and next action.

05 Usage wallet

Tokens, voice minutes, WhatsApp, SMS, storage and call recordings tracked.

06 Executive intelligence

Revenue, response speed, conversion, AI performance and team metrics.

MARKET ENTRY

Start narrow, win deeply.

Real estate first. Prove ROI. Reuse the platform core across adjacent verticals.

Real estate is the beachhead.

The use case is simple, valuable and easy to explain.

Lead arrives — AI answers — Qualifies — Books viewing — Follows up

The MVP should focus on one promise:

Every real estate inquiry gets answered, qualified, scheduled and tracked - automatically, with human handoff when needed.

Clear ROI story: faster response, fewer missed leads, better sales discipline, lower admin burden.

Modules are packaged as business capabilities.

Each module should feel separate, simple and commercially understandable.

01 Core SaaS

workspaces, tenants, users, roles, permissions

02 CRM + Leads

contacts, pipeline, lead history, owner, next action

03 Unified Inbox

WhatsApp, email, web chat, voice transcripts

04 AI Assistants

receptionist, sales rep, leasing assistant

05 Booking + Calendar

viewings, reminders, availability, handoff

06 Automation

sequences, routing, follow-up, escalation

07 Analytics

lead speed, conversion, revenue and AI performance

08 Usage Wallet

tokens, calls, WhatsApp, SMS, storage, top-ups

09 Industry Templates

real estate first, then repeatable vertical packs

Sell AI employees, not technical features.

Clients understand roles faster than modules.

01 AI Receptionist

answers every inquiry and captures context

02 AI Sales Rep

qualifies, follows up and pushes next action

03 AI Leasing Assistant

handles rental inquiries and viewings

04 AI Meeting Assistant

notes, summaries and action items

05 AI Recruiter

screens candidates and schedules interviews

06 AI Call Centre Agent

handles inbound and outbound call flows

Each AI employee includes: job description, allowed actions, tone, knowledge base, integrations, permissions, scripts, limits, escalation rules, human handoff and success metrics.

The model protects margin from day one.

AI usage must be metered, not hidden inside unlimited promises.

1

Platform subscription

2

Setup and onboarding fee

3

Usage-based revenue

4

Premium AI employee packs

Usage items to meter

—

AI tokens and model routing

—

Voice minutes and call recordings

—

WhatsApp, SMS and email volume

—

Storage and premium integrations

Start with agencies that feel the pain every day.

Real estate gives a direct sales story: missed lead equals missed commission.

01 Target buyer

Real estate agency owner, sales director, brokerage founder, premium property consultant.

02 First offer

AI lead desk for WhatsApp, email, web chat, qualification, viewing booking and follow-up.

03 Proof metric

Response time, booked viewings, qualified leads, follow-up completion and recovered inquiries.

Launch motion

Pilot 3-5 agencies -> refine scripts
-> package pricing -> expand
through referrals, developer
partnerships and agency networks.

— Founder-led enterprise-style selling in Dubai.

— Concierge onboarding instead of self-serve at the beginning.

Build the platform in three controlled phases.

Do not overbuild before revenue validation.

\$150k-\$300k

Phase 1 - Real estate MVP, 3-5 months

+\$150k-\$350k

Phase 2 - stronger AI platform, 3-5 additional months

+\$300k-\$800k

Phase 3 - multi-niche expansion, 6-12 additional months

MVP foundation

SaaS core, CRM, lead capture, unified inbox, AI receptionist, AI sales assistant, booking, dashboard, usage tracking.

Commercial V1

Inbound AI calls, stronger automations, AI meeting assistant, reporting, onboarding and reputation management.

Expansion

Cold calling, AI call centre, mobile apps, HR, document signing, marketing, vertical templates and website builder.

The moat is operational packaging.

Aurex should win by clarity, vertical focus and controlled AI economics.

01 Vertical-first templates

Prebuilt workflows, scripts and KPIs for real estate before horizontal expansion.

02 AI employee marketplace

Reusable roles create a product language buyers can understand and sales can package.

03 Metered cost control

Usage wallet protects margin and prevents unlimited AI cost leakage.

04 Multi-tenant architecture

Built for many companies from day one: permissions, billing, audit logs and limits.

05 Dubai premium positioning

Luxury B2B brand, concierge onboarding and high-trust execution for serious businesses.

06 Human handoff by design

AI performs the repetitive work while humans keep control of high-value decisions.

Recommended initial raise: \$350k-\$500k.

Enough to build the MVP, run pilots and avoid stopping before commercial proof.

60%

Product and engineering

15%

AI, voice, cloud and infra buffer

15%

Dubai pilots and go-to-market

10%

Legal, compliance, design and contingency

Use of funds should stay disciplined: build one strong wedge, prove paid demand, then raise or reinvest for the broader platform.

Funding number is a strategic recommendation based on the internal MVP estimate, not a final financial offer.

From concept to investable asset.

The next deliverables should reduce risk and make the product feel inevitable.

01 01 - Name and domain validation

Check Aurex AI and prepare 2-3 premium alternatives.

02 02 - One-page landing page

Premium website narrative for client and investor conversations.

03 03 - MVP scope freeze

Define exact real estate workflow, user roles, scripts and integrations.

04 04 - Technical architecture

Multi-tenant SaaS, AI orchestration, usage wallet and security foundation.

05 05 - Pilot package

Offer, pricing, onboarding checklist and success metrics for first agencies.

06 06 - Codex build track

Use this deck as strategic source while Codex builds the web/landing experience.

Source notes

Selected sources used for market framing and strategic assumptions.

Internal source

Aurex AI - Dubai AI Command Platform Project Brief, working specification dated 2026-06-05.

Market sources

- UAE official portal - UAE Strategy for Artificial Intelligence 2031.
- Reuters/Fitch coverage - Dubai real estate prices and 2024 transaction value context.
- Dubai Economic Agenda D33 public materials - digital economy and 2033 growth agenda.
- Public AI infrastructure coverage - UAE Stargate AI campus and regional AI investment momentum.

This pitch is a strategic concept deck. All financial estimates are rough planning ranges and should be validated through final scope, provider costs, integrations and legal review.
